

Application Profiles

 This feature requires a **CommCare Software Plan**

This feature (Application Profiles) will only be available to CommCare users with an Advanced Plan or higher. For more details, see the [CommCare Software Plan page](#).

Application profiles let you control which languages (and any multimedia for these languages) are installed on a phone. You can create multiple application profiles for your application that allow you to install different languages to different phones. Future application updates will also only download multimedia and text for the application profile originally installed on the phone. Application profiles can reduce the installation size for applications that support a large number of languages or regions.

Creating Application Profiles

At the top of the left hand side of the project space, click on the title of the project you are working on to see the main project page. On the project page for your application, you will see two tabs - "Versions" and "Application Profiles." Use the "Application Profiles" tab to create new profiles. For a given profile, specify the name, which languages you want to install on the phone, and the default language.

The screenshot shows the "Application Profiles" tab in a web interface. At the top right, there is a "Saved" button. Below it, the section is titled "Current Profiles". A descriptive text states: "Application profiles let you install the same application with different languages and options on different phones. Application profiles will appear in new versions of the application." Below this is a table with four columns: "Profile Name", "Languages", "Default Language", and "Practice Mobile Worker".

Profile Name	Languages	Default Language	Practice Mobile Worker
Mozambique	x por	por	No practice mode mobile workers available
Mada	x frm	frm	No practice mode mobile workers available
Benin	x fra	fra	No practice mode mobile workers available
Senegal	x fra	fra	No practice mode mobile workers available

At the bottom left of the table area, there is a "+ Add Profile" button.

Installing An Application Using a Profile

Once you have defined an application profile and saved, you can choose which profile to use when installing an application. You will select from profiles you created in the drop menu labeled "Application Profile"

 Note: You **must create a new version** of the application **and refresh** the page in order to use any new application profiles.

Version 70

Download to Android

Online Install

Offline Install

Download [CommCare](#) from [Google Play](#) to your Android device.

Application Profile: Mexico

Open the app on your Android and use one of the following installation methods:

[Scan Application Barcode](#)

[Enter App Code](#)

Download to Java Phone

Send to phone via SMS
