

# Messaging Beginner Tutorial

This tutorial will introduce you to using Messaging within your CommCare application. This will be based on a very simple application (registration of a pregnant woman and tracking of pregnant women.). We'll add some basic messaging to the application including a welcome message to registered women, a message to remind women to visit the clinic if she has danger signs and messages to health workers to remind them of delivery dates.

## Reviewing CommCare and Case Management

Before starting this tutorial, please make sure you've completed the [Beginner Tutorial](#) and [Basic Case Management Tutorial](#). This contains important information about setting up a basic CommCare application.

## Learning Objectives for Messaging Beginner Tutorial

In this tutorial you will learn the following:

- Choosing the SMS connection for a project
- Registering a case that has a phone number that can be used for Messaging
- Adding a phone number to a mobile worker so that they can send and receive messages
- Setup a Reminder that is sent to all cases
- Setup a Conditional Reminder
- Setup a Reminder That Sends Based on a Date in a Case
- Viewing Messages in the Reminder Calendar and Message Log

Before starting this tutorial, [setup a new project space](#), unless you've already done so.
