

Web Apps

Web apps require a CommCare Software Plan

This feature is only available to CommCare users with a **Pro Plan** or higher. For more details, see the [CommCare Software Plan page](#). Note that all users, even those with the Community Plan, can preview forms on the web (the Application Preview feature).

Using CommCare Apps on the Web

When you build a CommCare app, you can choose to deploy it to a mobile device, to the web, or both!

Web apps can be used for:

- Testing CommCare applications or forms
- A data entry person who needs to be able to modify a mobile users case list or add additional data
- Cases from mobile applications that are shared with a web app- for example, allowing a nurse at a clinic to update cases when patients visit. A Community Health Worker with a mobile handset is then able to view the updates from the clinic and see what instructions the patient was given.
