Setting up a new phone

This document describes how to set up a new phone/sim card for online access. The interface described is for the Nokia 2700c phone.

1. From your phone's standby screen select “Menu”
2. Select “Settings”
3. Select “Configuration”
4. Select “Personal Configuration settings”
5. Select “Options” > “Add New”
6. Select “Access point”
7. Select “Account Name” and change the default account name to “CommCare” (or any name you prefer)
8. Select “Access Point Settings”
9. Make sure “Data bearer” is set to “GPRS” or “Packet data”
10. Select “Bearer settings”
11. Select “GPRS access point/Packet data access point”
12. Change the access point to the network specific APN. (eg. yellopix.mtn.co.ug for MTN Ug, epc.tmobile.com for any T-Mobile phone)
13. Leave “User name” & “Password” blank.
14. Go back to the “Configuration” menu (“Menu” > “Settings” > “Configuration”)
15. Select “Preferred access point”
16. Select “CommCare” (or any other name you chose in step #7)
17. Select “Default Configuration Settings”
18. If nothing is listed, follow these steps to create a configuration setting:
   a. Go back to “Personal Configuration Settings”
   b. Select “Options”->“Add New”
   c. Select “Web”
   d. Keep the defaults for the account and create it
   e. Select “Default Configuration Settings”
19. Choose the newly created access point/web account.
20. On the previous screen, select “Activate default in all app”
21. Restart the phone
